

Security Product Bulletin: NEW Half and Full Angle Rings

New Secure Stack Half and Full Angle Rings Now Available

Security's new half and full angle rings are used for supporting and guiding the stack.

Applications

Secure Stack Half Angle Rings are used as saddle supports in horizontal and sloped runs.

Secure Stack Full Angle Rings are used as guides for vertical runs of pipe to maintain alignment and provide lateral support while still permitting vertical expansion. The inside diameter is 1/8" larger than the outer diameters of the stack, allowing movement of the stack within the ring. Full Angle Rings include hardware to assemble the two halves together. Please refer to installation instructions for appropriate spacing.

Features

- Manufactured with stainless steel
- Available in standard lead time
